DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kato et al (2002/0065150). Kato discloses a golf ball comprising a core and cover. The core is made from a composition comprising 100 parts of a high-cis polybutadiene rubber containing a cis-1,4 bond not less than 80. The composition also includes 25 to 39 parts of alpha, beta unsaturated carboxylic acid and 0.5 to 5 parts of a crosslinking agent. Applicant further claims the polybutadiene has a double bond residual rate from 80 to 99%. Page 10 of the present specification discloses prior to treatment an ordinary polybutadiene is assumed to have a double bond residual rate (%) of 100% (degree of unsaturation). Therefor Kato discloses a high cis polybutadiene with a 100% unsaturation while applicant claims an upper limit of 99%, which borders Kato. Since the upper limit borders Kato the properties of the ball would appear to be the same or very close. One of ordinary skill in the art would vary the degree of unsaturation/saturation for enhanced ball performance.
